Enrollment Balancing
DBRAC

10/8/2015

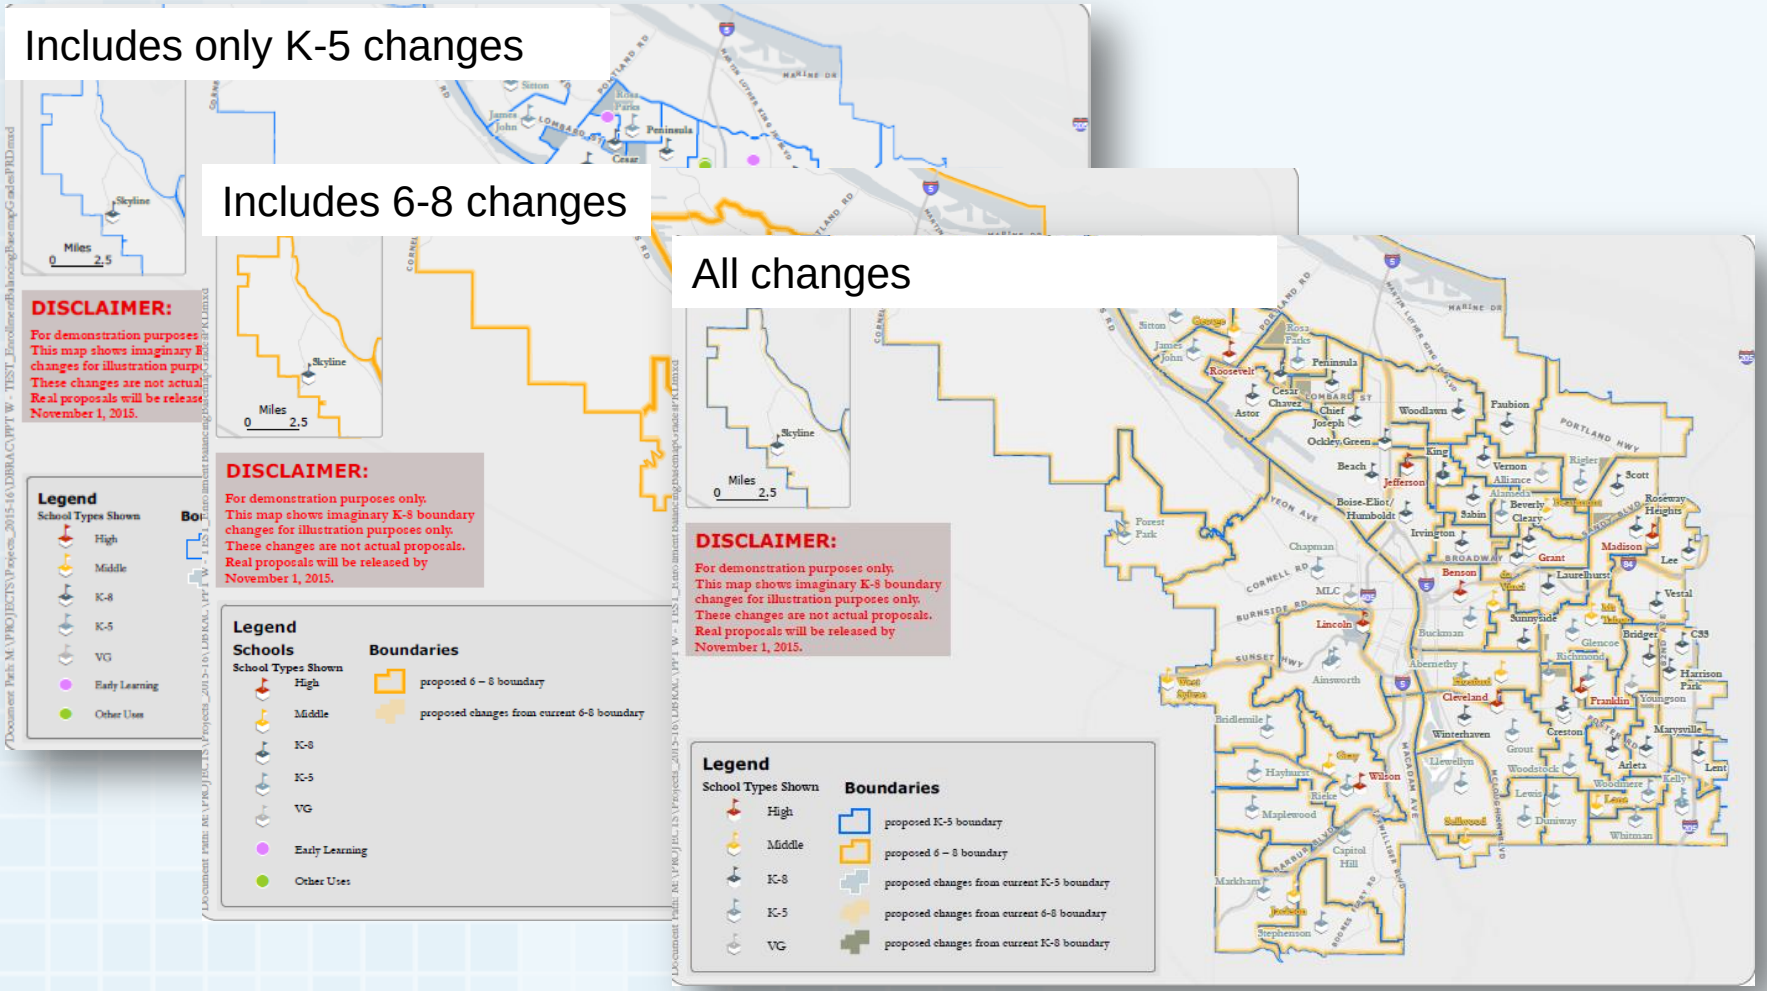

Objective

- Review components of a scenario
- Present draft key performance indicators
- Gather feedback
  - Key performance indicators
  - Overall “packaging” of reporting and materials
  - Review sample scenario

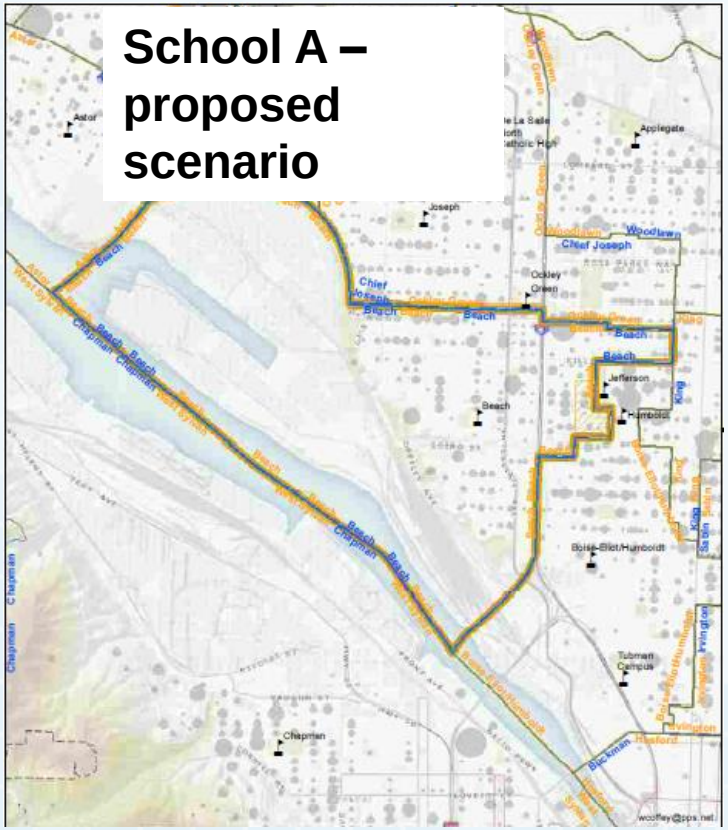

What is a scenario?

- Scenarios are plans for adjusting enrollment so that in the coming years we:
  - Manage growth
  - Ensure program access
- Take into account enrollment forecasts
- Based on DBRAC's values framework and current policy

System level maps

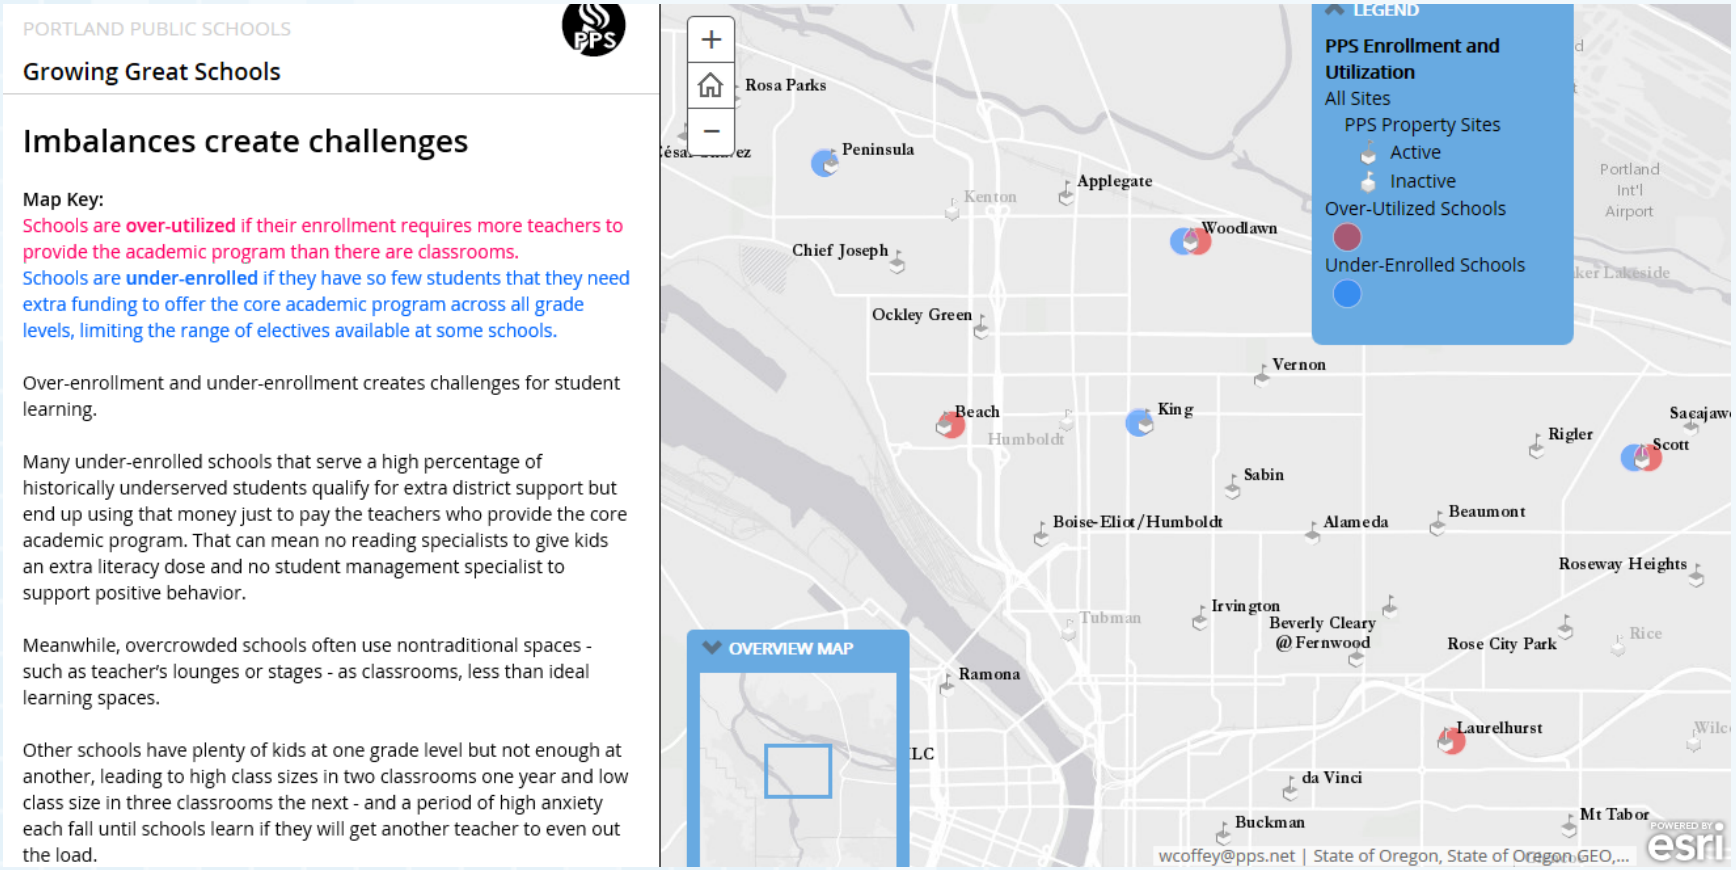

Scenario comparisons for each school

- Includes an individual school map for every produced scenario
- Includes KPIs for each of these scenarios
- Includes descriptive statistics for each school within each scenario (i.e. facility capacity utilization, racial demographics of each school, etc..).

Story maps

https://goo.gl/6XHrJ3

Key Performance Indicators (KPI)

- Most critical metrics to assess scenarios
- KPI's should be:
  - comparable across all scenarios
  - relevant to current context
  - possible to generate repeatedly and accurately
  - few in number
  - accessible to the general public

Summary of Scenario Components

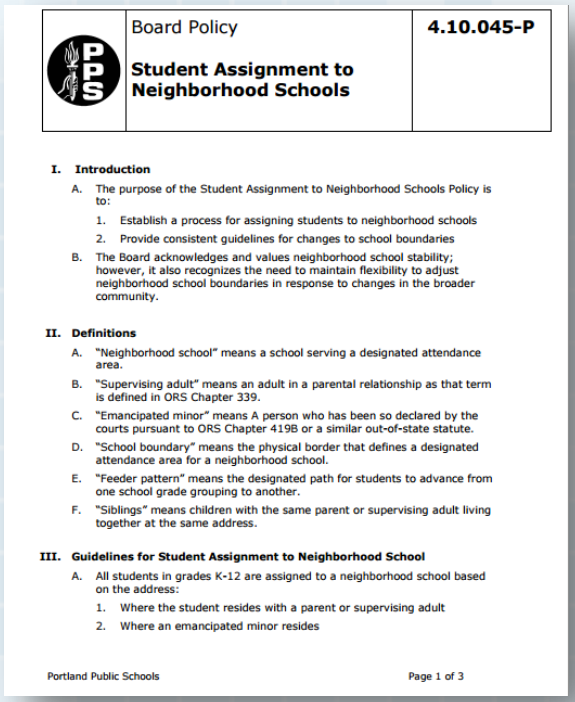

System level maps	Individual school maps	Key performance indicators (KPIs)	Other Analyses
• One map with all proposed changes • Series of individual maps highlighting changes by specific grades (K5, K8, HS)	• Detailed maps that highlights change at an individual school	• Measures used to assess each system level map • All KPIs disaggregated	• Tables that compare scenarios to one another across the KPIs • Story maps that visually tell our story

Completion of actual scenarios are still in process

KEY PERFORMANCE INDICATORS

KPI Alignment

- Aligned to Board Policy and current Administrative Directive (AD)
- Takes into account DBRACs changes to Administrative Directive

Board Policy

Student Assignment to Neighborhood Schools

4.10.045-P

I. Introduction

A. The purpose of the Student Assignment to Neighborhood Schools Policy is to:

1. Establish a process for assigning students to neighborhood schools
2. Provide consistent guidelines for changes to school boundaries

B. The Board acknowledges and values neighborhood school stability; however, it also recognizes the need to maintain flexibility to adjust neighborhood school boundaries in response to changes in the broader community.

II. Definitions

A. "Neighborhood school" means a school serving a designated attendance area.

B. "Supervising adult" means an adult in a parental relationship as that term is defined in ORS Chapter 339.

C. "Emancipated minor" means A person who has been so declared by the courts pursuant to ORS Chapter 419B or a similar out-of-state statute.

D. "School boundary" means the physical border that defines a designated attendance area for a neighborhood school.

E. "Feeder pattern" means the designated path for students to advance from one school grade grouping to another.

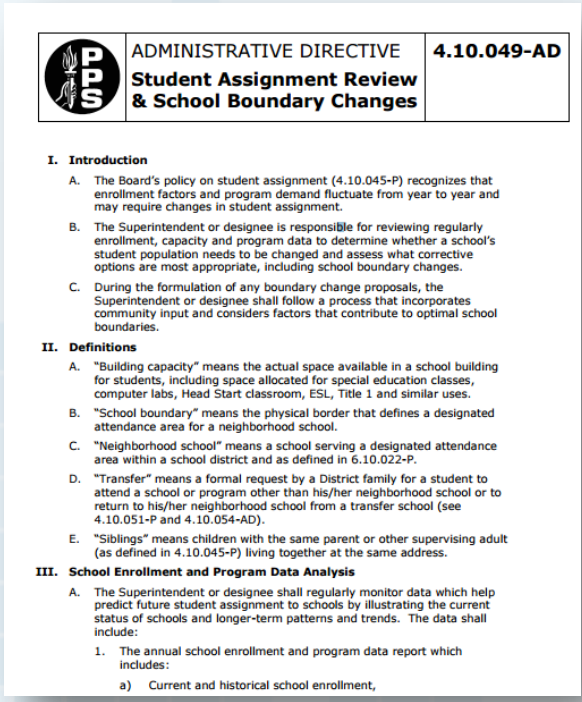

F. "Siblings" means children with the same parent or supervising adult living together at the same address.

III. Guidelines for Student Assignment to Neighborhood School

A. All students in grades K-12 are assigned to a neighborhood school based on the address:

1. Where the student resides with a parent or supervising adult
2. Where an emancipated minor resides

ADMINISTRATIVE DIRECTIVE

Student Assignment Review & School Boundary Changes

4.10.049-AD

I. Introduction

A. The Board's policy on student assignment (4.10.045-P) recognizes that enrollment factors and program demand fluctuate from year to year and may require changes in student assignment.

B. The Superintendent or designee is responsible for reviewing regularly enrollment, capacity and program data to determine whether a school's student population needs to be changed and assess what corrective options are most appropriate, including school boundary changes.

C. During the formulation of any boundary change proposals, the Superintendent or designee shall follow a process that incorporates community input and considers factors that contribute to optimal school boundaries.

II. Definitions

A. "Building capacity" means the actual space available in a school building for students, including space allocated for special education classes, computer labs, Head Start classroom, ESL, Title 1 and similar uses.

B. "School boundary" means the physical border that defines a designated attendance area for a neighborhood school.

C. "Neighborhood school" means a school serving a designated attendance area within a school district and as defined in 6.10.022-P.

D. "Transfer" means a formal request by a District family for a student to attend a school or program other than his/her neighborhood school or to return to his/her neighborhood school from a transfer school (see 4.10.051-P and 4.10.054-AD).

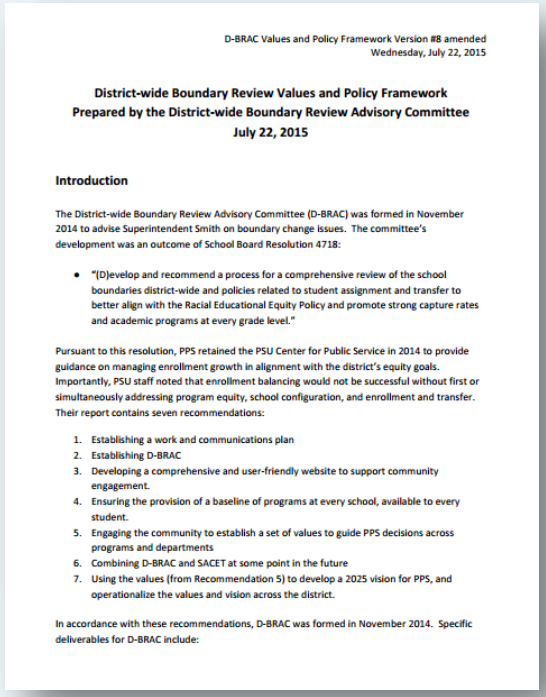

E. "Siblings" means children with the same parent or other supervising adult (as defined in 4.10.045-P) living together at the same address.

III. School Enrollment and Program Data Analysis

A. The Superintendent or designee shall regularly monitor data which help predict future student assignment to schools by illustrating the current status of schools and longer-term patterns and trends. The data shall include:

1. The annual school enrollment and program data report which includes:

a) Current and historical school enrollment,

D-BRAC Values and Policy Framework Version #8 amended
Wednesday, July 22, 2015

District-wide Boundary Review Values and Policy Framework
Prepared by the District-wide Boundary Review Advisory Committee
July 22, 2015

Introduction

The District-wide Boundary Review Advisory Committee (D-BRAC) was formed in November 2014 to advise Superintendent Smith on boundary change issues. The committee's development was an outcome of School Board Resolution 4718:

- "(D)evelop and recommend a process for a comprehensive review of the school boundaries district-wide and policies related to student assignment and transfer to better align with the Racial Educational Equity Policy and promote strong capture rates and academic programs at every grade level."

Pursuant to this resolution, PPS retained the PSU Center for Public Service in 2014 to provide guidance on managing enrollment growth in alignment with the district's equity goals. Importantly, PSU staff noted that enrollment balancing would not be successful without first or simultaneously addressing program equity, school configuration, and enrollment and transfer. Their report contains seven recommendations:

1. Establishing a work and communications plan
2. Establishing D-BRAC
3. Developing a comprehensive and user-friendly website to support community engagement.
4. Ensuring the provision of a baseline of programs at every school, available to every student.
5. Engaging the community to establish a set of values to guide PPS decisions across programs and departments
6. Combining D-BRAC and SACET at some point in the future
7. Using the values (from Recommendation 5) to develop a 2025 vision for PPS, and operationalize the values and vision across the district.

In accordance with these recommendations, D-BRAC was formed in November 2014. Specific deliverables for D-BRAC include:

KPI Development

- Staff developed and then prioritized a subset of items to further refine into KPIs
- Also, differentiated between “global KPI” and “situational” metric
  - Global KPI = measured for every scenario.
  - Situational metric = reported on a case-by-case basis for affected schools and/or scenarios.

Global KPIs

1. All neighborhood schools operate with at least 2 sections per grade level
2. Reduction in number of schools that are over capacity
3. Fewer middle schools and high schools have split feeder patterns
4. Awareness of racial, ethnic and socio-economic distributions at every school
5. Awareness of number of schools that are deemed high, medium and low poverty
6. More students attend schools within closer walking distance to their home
7. Fewer students are reassigned to new schools
8. Fewer students who were directly affected by recent enrollment balancing changes are subject to new changes

Summary

Comparable	• Can be used across every scenario so comparisons can be made
Feasible & Accurate	• Can be repeatedly generated • High degree of accuracy • Measures what is intended
Relevant	• Aligned to DBRAC framework and Board policy • Measure current problem areas (i.e. under-enrollment)
Accessible	• Few in number • Not too complicated

*All KPIs will be disaggregated by Historically Underserved racial groups and socioeconomic status

Situational Metrics

- More schools operate within preferred facility capacity utilization ranges
- Neighborhood schools operate within preferred enrollment ranges given their configuration
- Fewer students need to be bused
- Minimize expenses related to modification of facilities
- Enrollment ranges within similar configurations are minimized
- Awareness when special education focus classrooms are re-located
- More students have safe routes to school as determined by Transportation Department.
- More neighborhood association boundaries are aligned with school boundaries.

SAMPLE SCENARIO

Scenario: Sample Test

- This scenario is for training purposes only, and does not include several types of changes that are expected in actual scenarios:
  - Maintains HS feeder patterns
  - Maintains current school configurations
  - Maintains district-wide program locations
  - Does not open new schools

Scenario: Sample Test

- Additional constraints:
  - Contiguous boundaries
  - K-5 can only feed one 6-8
  - A K-5 cannot feed a K-8
- Uses current students (2014-2015), not projections

Scenario: Sample Test

- Within those constraints, this scenario shows boundary changes designed to accomplish the following:
  - Decrease number of schools that have less than two sections per grade level
  - Decrease number of schools operating at or above 105% of utilization
  - Limit the number of students impacted by boundary change

Challenges with Scenario

- DOES NOT lead to significantly more right-sized schools (the highest desired outcome in the Enrollment Balancing Values Framework).
- No significant reduction in the number of under-enrolled schools, particularly K-8 schools
- Half of currently over-utilized schools do not see improvement in this scenario

Challenges with Scenario

- Currently, 31% of K-8 students in historically underserved racial groups attend schools with fewer than 2 sections per grade level.
- If the sample scenario were adopted PPS estimates that rate would reduce to 28%, which is not a significant improvement.
- Schools with fewer than two sections per grade level have extra challenges in providing core programs to all students.

Updated Timeframe

- **Oct. 9-28**: **Drafting proposals**. PPS staff uses committee input to create proposals.
- **Oct. 29: Committee review begins.** Proposals shared at committee meeting and released online.
- **November**: **Committee and public review**. Community reviews proposals at meetings across the city, online survey and Twitter and Facebook town halls. Committee continues its review while absorbing public input.
- **December:** Committee makes proposal to Superintendent.
- **January:** Superintendent makes proposal to School Board.
- **January/February**: School board votes on proposal.
- **Fall 2016:** Implementation of approved changes begins; may occur in stages.

Upcoming DBRAC Meetings

- October 29: Initial Scenario Review
  - Clarification, Point out errors/show-stoppers
- November 5: Clarification & Discussion
  - Review any changes, begin assessment discussion
- November 19: Racial Equity Lens Training
  - De-brief listening sessions to date

Upcoming DBRAC Meetings

- December 3: Scenario assessment
- *December 5: Hold for Saturday work session?*
- *December 10: Hold for meeting to conclude assessment*
- *December 17: Hold for meeting to conclude assessment*

Appendix

DETAILED ASSUMPTIONS

Timeframe

- Scenarios will show what enrollment at schools could be in 2015 if the proposed changes were fully in effect today
- Scenarios will show potential enrollment at schools in 2016, and 2020
  - 1 & 5 years from now
  - Allows for some level of phased in implementation (discussed later)

Forecasts

- Enrollment forecasts developed in 2014 based on 2013 data are the baseline for scenario modeling for future years

Capture rates

- The 2014 capture rates by neighborhood are the basis for scenario modeling.
- When shifting boundaries, the current capture rate will be assumed to continue at the new school
- It may be necessary to modify capture rates if shifting from a K-8 to a MS, or if a trend in capture rate change is visible from enrollment/transfer data

Net transfers

- For modeling purposes, every school will have a net transfer rate:
  - Transfers out of a school's catchment area – transfers in to a school from other neighborhoods
- For new schools or new configurations, the net transfer rate will be based on rates at schools with same structures and similar demographics/proximity to choice programs
