TOGETHER,
WE RISE

WITH **EXCELLENCE.** WITH **PURPOSE.**

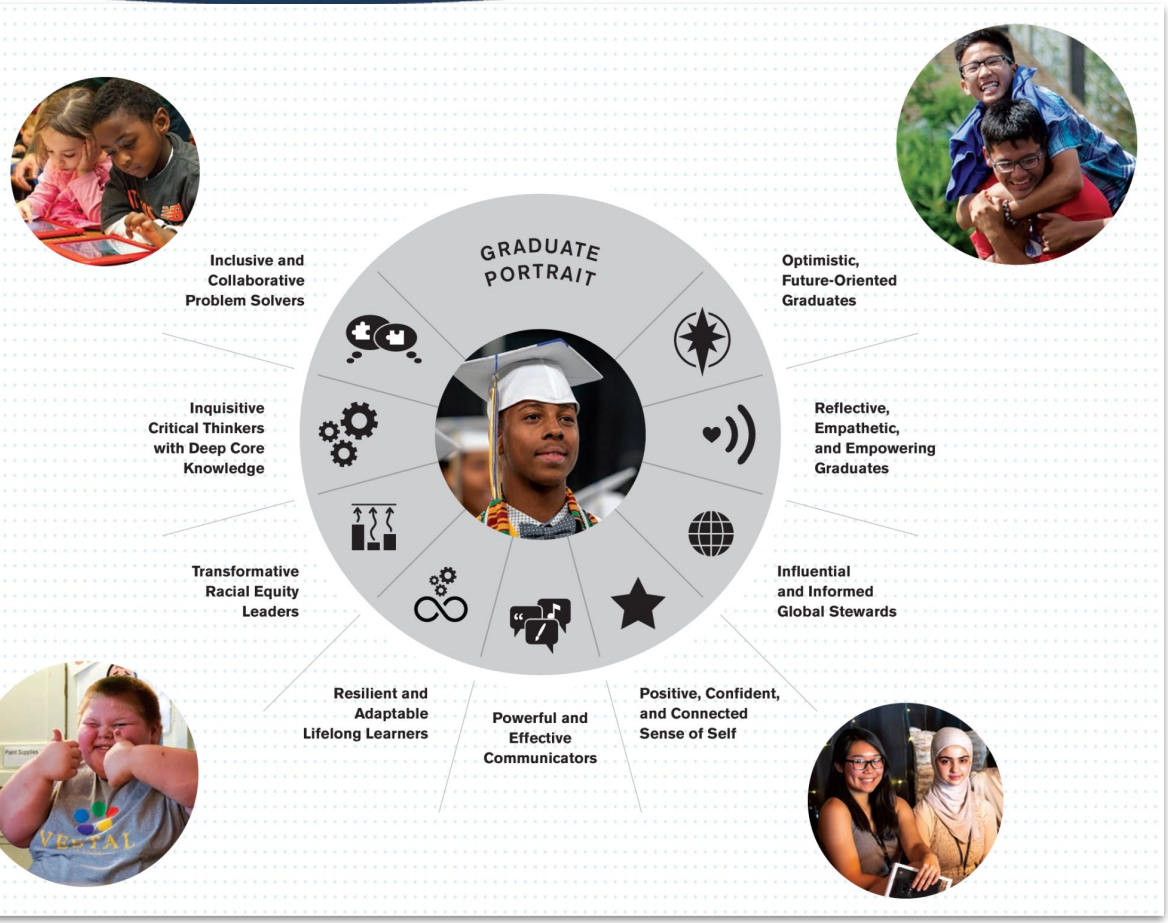

AI in PPS

Learning Target and Success Criteria

I am learning how PPS is using ODE guidance and national standards to create a plan so that every student graduates with AI literacy skills they need to be successful in the modern workforce.

I can list one way AI literacy is help our students meet the goals of the PPS Graduate Portait.

PPS Portrait of a Graduate in a World with AI

Profile of an AI Ready Graduate

Learner
Use AI to create plans for learning new skills, get unstuck, and seek feedback to improve understanding.

Problem Solver
Use AI as a brainstorming partner to generate new ideas and explore a wide range of possibilities.

Researcher
Use AI to investigate and analyze topics, evaluate claims, and compare sources of information.

Connector
Use AI to increase human collaboration, including overcoming language barriers, and finding common ground.

Synthesizer
Use AI to synthesize, remix, and refine information into formats/levels of complexity that meet their needs.

Storyteller
Use AI to present and communicate complex ideas through text, image, audio, video, and other media.

Essential Questions

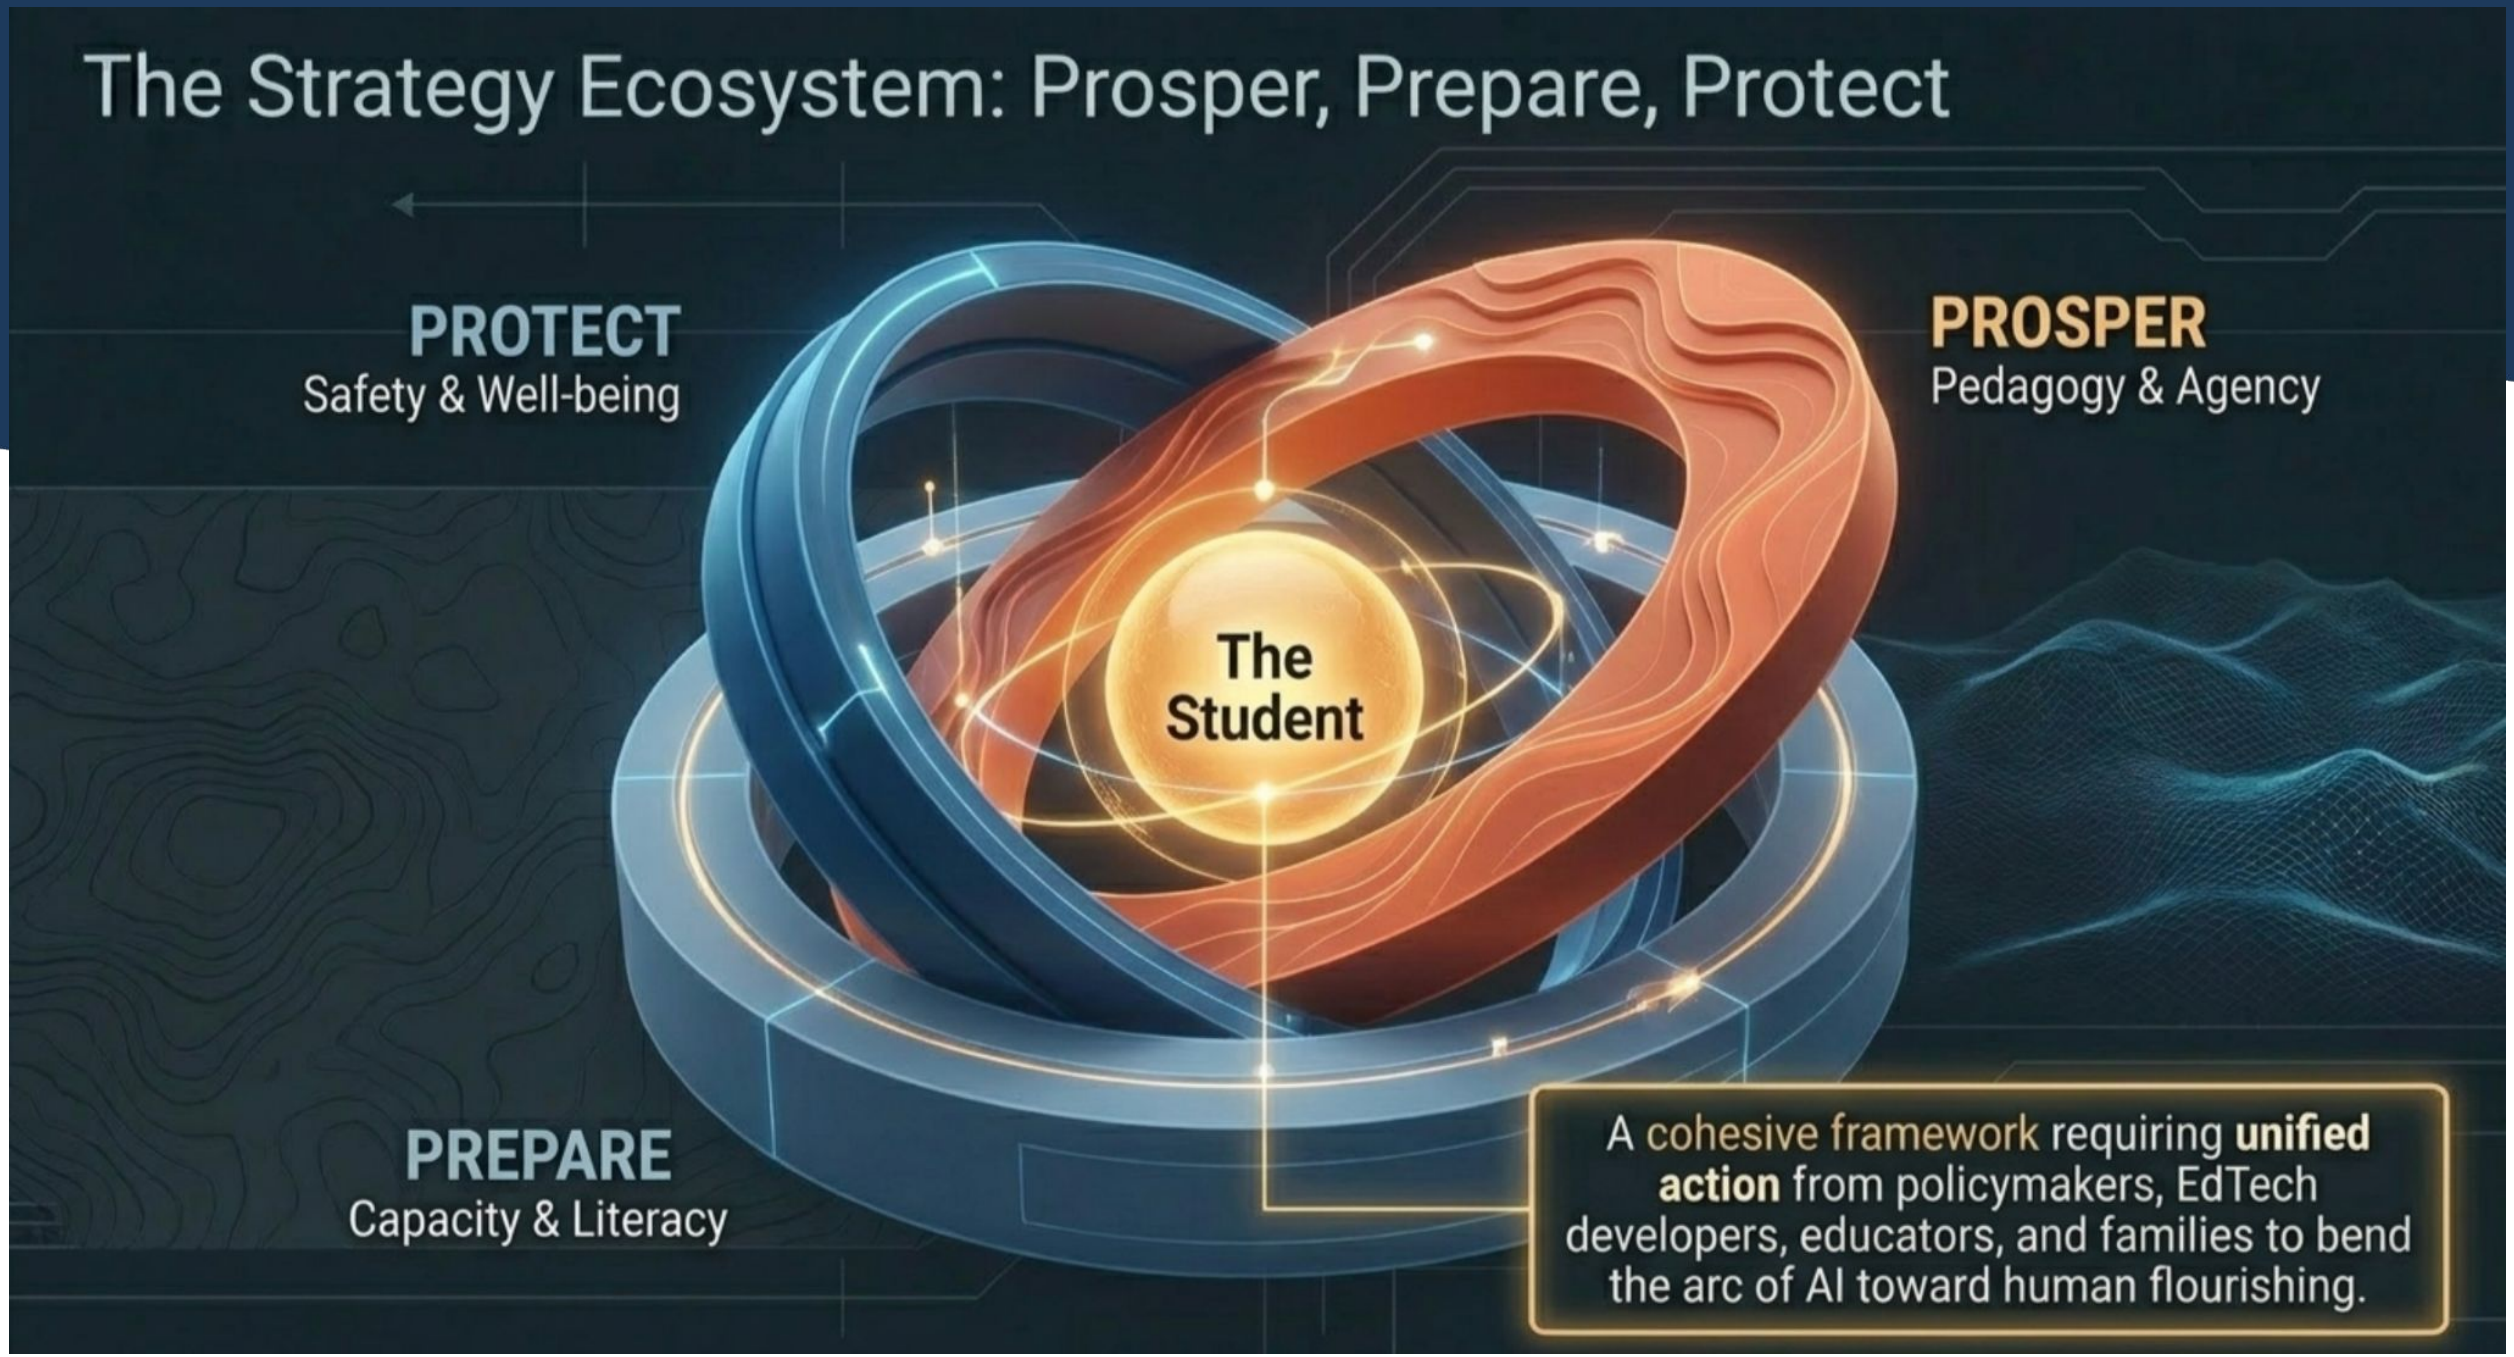

Systems

How might we ensure human expertise thrives in an AI-enabled classroom?

Students

How might we evolve our instruction so that students graduate with the AI literacy required for the modern workforce?

The Strategy Ecosystem: Prosper, Prepare, Protect

District Generative AI Readiness Assessment

Readiness Area	Exploring	Investigating	Implementing	Innovating	Equity Prompts (ODE)
Leadership & Vision	Leaders are aware AI exists but unsure of relevance. Conversations happen informally without a shared vision.	Leaders are beginning to articulate how AI might align with district goals. A small team or committee is exploring use cases and risks.	A districtwide AI vision and plan are developed, aligned to strategic priorities. Leadership teams coordinate implementation and risk assessments.	AI vision is embedded across the system. Leaders use AI strategically to enhance outcomes, model responsible practices, and adapt through continuous monitoring and revision.	Who is included in the vision? Are marginalized voices represented?
Policy, Ethics & Equity	No formal AI policies exist. Risks, ethics, and privacy are recognized but not addressed.	Initial policy drafts consider data privacy, student protections, and access. Leaders research other models and equity implications.	Board-approved or district-level policies guide responsible use. Policies address privacy, plagiarism, bias, copyright, and equity. Staff receive orientation on compliance.	Policies are comprehensive, equity-centered, and reviewed annually with community input. Ongoing audits and revisions ensure equity and compliance.	How are we training staff and students to recognize bias, inaccuracy, plagiarism, and copyright risks — and to critically analyze societal impacts while practicing digital citizenship?
Instruction & Assessment	A few educators experiment with AI tools (lesson ideas, grading help). No systematic approach.	Pilots underway with teachers using AI to personalize learning, design materials, or test formative assessments. Limited documentation.	AI is integrated into instructional frameworks. Teachers use it to personalize learning, design assessments, and adapt content. Students are supported in ethical use.	AI fosters creativity, problem-solving, and higher-order skills. Instruction is continually refined through monitoring and equitable review.	How are assignments shifting to prevent plagiarism and foster deeper thinking — and how are we monitoring uneven impacts of bias (e.g., MLLs or students of color flagged disproportionately)?
Professional Learning	No formal PD. Teachers seek resources independently.	District offers introductory PD (AI basics, risks, opportunities). Equity and ethics are mentioned but not deeply addressed.	Ongoing PD is aligned to district vision. Teachers learn both practical AI use and how to teach AI ethics/digital literacy.	PD is adaptive and personalized, often AI-powered. Educators apply AI to pedagogy and assessment with ongoing reflection and revision for equity.	Do all educators understand AI's limits and risks?

District Generative AI Readiness Assessment

Readiness Area	Exploring	Investigating	Implementing	Innovating	Equity Prompts (ODE)
Student Use & Literacy	A small number of classrooms introduce AI concepts. Students are aware of AI but lack structured guidance.	Students use AI in multiple classes for basic tasks and begin discussing ethical implications. Limited evidence of proficiency.	Students regularly engage with AI for learning, projects, and skill-building. They apply critical thinking to AI outputs and understand risks like bias or plagiarism.	Students critically use AI, analyze societal impacts, and connect to career pathways. Practices are regularly reviewed to ensure equity and responsible use.	How do we ensure equitable access (esp. ML learners, students w/ disabilities)?
Operations & Business Functions	District is curious about AI's role in automating administrative tasks. No concrete actions yet.	Pilots in areas such as HR, scheduling, or communications. Tech ecosystem review is underway.	AI is integrated into multiple operations. Systems are upgraded to support efficiency and compliance. Staff are trained in responsible use.	AI optimizes operations, reinvesting savings into equity initiatives. Systems evolve through continuous monitoring and staff adaptation.	Do efficiency gains free up resources for equity work?
Community Engagement	AI is rarely mentioned with parents, staff, or students. Communication is reactive or minimal.	Some awareness sessions and early communication efforts occur. District responds to questions/concerns but lacks a structured plan.	Regular updates and feedback sessions engage families and staff. Concerns about ethics, access, and privacy are addressed proactively.	Engagement is ongoing, two-way, and co-designed with families and staff. Feedback is used to revise and strengthen practices.	How do we address community concerns around access, privacy, and fairness?
IT (data, technical, security)	IT staff are aware AI may affect systems but haven't evaluated risks. No review of infrastructure, data flows, or security concerns.	District IT team is assessing current data systems, security protocols, and infrastructure capacity to handle AI. Initial conversations on interoperability, access, and vendor requirements.	IT team has strengthened data governance, student privacy protections, and technical infrastructure. They review vendors for compliance and equity concerns, ensure secure integration, and develop staff protocols.	IT continuously monitors AI for security, bias, and reliability. Policies and systems are regularly updated in collaboration with equity and teaching teams.	Who might be most harmed if this system fails — and how are those risks monitored, mitigated, and addressed?

AI Vision

Portland Public Schools will leverage Artificial Intelligence (AI) as a transformative, ethical, and human-centered tool to accelerate student achievement, disrupt systemic inequities, and prepare every graduate for an AI-powered future. Our vision is to cultivate a teaching and learning community where AI amplifies human potential and strengthens, but never replaces, the essential relationships at the heart of education.

AI Workgroups

AI Planning Committee

- Meets bi-weekly
- Build a common understanding, identify key priorities, and develop a district roadmap for Artificial Intelligence
- Membership
  - Professional Learning, IT, PK- 5 Academics

AI Advisory Committee

- Meets quarterly
- Recommending group on key priorities, guiding principles, and actions
- Membership
  - Building Administrators, Educators, PEC Staff, Professional Learning, IT

AI Explorers Club

- Meetings to start the second semester; paused due to budget freeze after one meeting
- Testing, giving feedback, and participating in professional learning
- Membership
  - Educators and District Staff

AI Perceptions Survey Domains

2025-2026

Student Survey Results

6th-12th Grade

Student AI Usage						
	Almost all the time	Most of the time	Sometimes	Once in awhile	Almost Never	I don't know
How often do you use AI?	3%	7%	13%	20%	57%	0%
How often do your teachers tell you to use AI for academic purposes?	1%	3%	12%	22%	61%	1%

Student Perception of AI	
	% Helpful
Overall, how harmful or helpful is AI to your academic success when your teachers ask you to use it for academic purposes?	24%
Overall, how harmful or helpful is AI to your academic success when you use AI to help with your schoolwork?	28%

Progress and Achievements

- **Mandatory Training**: Will successfully add AI-specific slides (Vision, Non-Negotiables, Data Stewardship) to the mandatory district InfoSec training.
- **Tool Governance**: Identified Google Gemini as the primary supported platform while exploring other resources for safer, filtered student access.
- **Community Engagement**: presented at “The Village Table” to involve parents and families in the policy conversation, collaborated with the Climate Crisis Response Committee, and engaged with students by conducting interviews about AI in the district.
