Office of School Modernization

2025 Bond Seismic Program Update

September 9, 2025

Seismic Work in 2012, 2017, and 2020 Bonds

Full Seismic Retrofits & New Buildings:

Benson Polytechnic High School (Modernized 2024)
Franklin High School
Grant High School
Lincoln High School
McDaniel High School
Roosevelt High School
hayu alqi uxyat
Alameda Elementary
Creative Science School
Faubion PK-8
Hayhurst Elementary
Kellogg Middle School
Lent K-5
Lewis Elementary
Marysville Elementary

Partial and Roof-Level Seismic Improvements:

Winterhaven
Woodlawn

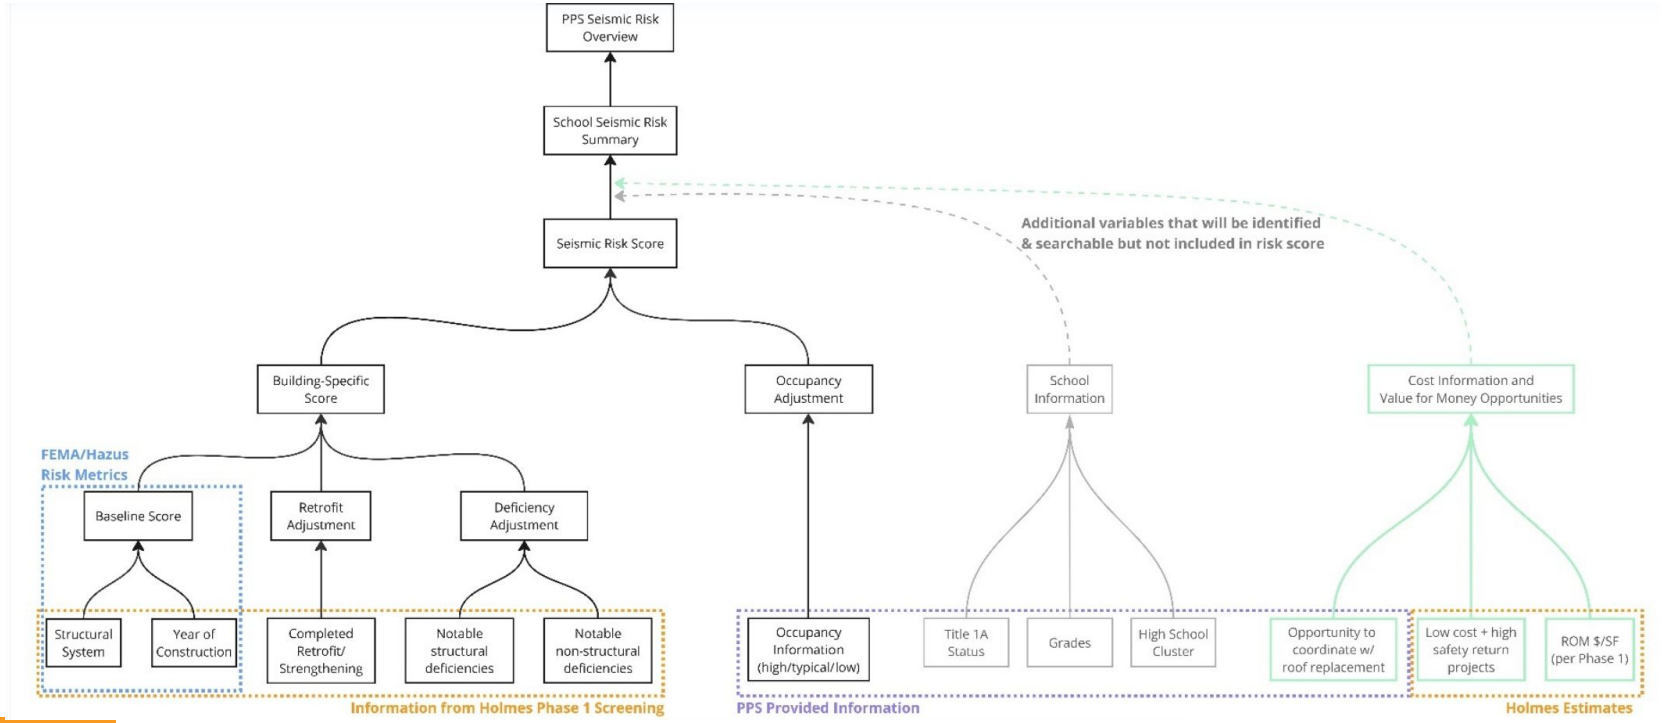

2025 Bond Seismic Improvements Resolutions

- In May, 2025, voters approved a general obligation bond to complete capital improvement projects for Portland Public Schools:
  - “Measure authorizes up to $1.83 billion... If approved, this measure would finance capital costs, including… seismic upgrades.”
- On May 6, 2025, the Board passed
  - Resolution 7109 - Urgent Need for Seismic Retrofitting of High-Risk School Buildings, and
  - Resolution 7110 - Resolution to Affirm the Board of Education’s Commitment to Track and Report Findings, Public Engagement and Recommendation of Seismic Upgrades through the School Facilities Improvement and Operations Committee.

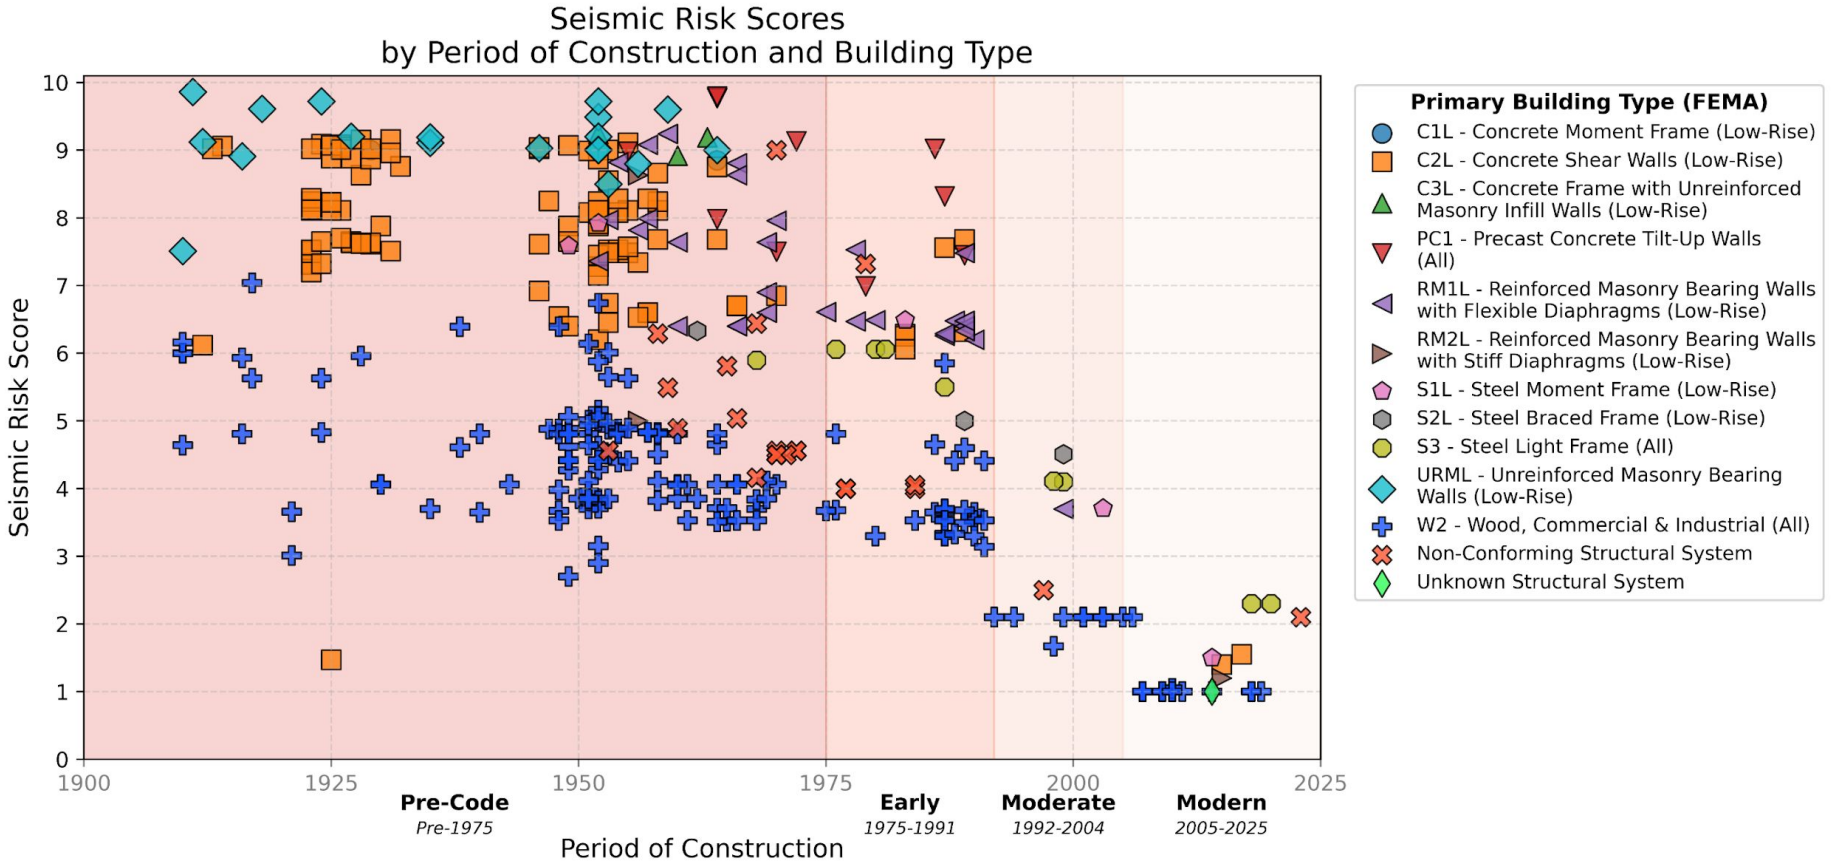

2025 Bond Seismic Improvements Program Status Report

- CURRENT PHASE – PRIORITIZATION AND PLANNING
  - Step 1. Gather detailed seismic deficiency data at all schools - Complete
  - Step 2. Obtain priority/risk scoring recommendations from structural engineer - Complete
  - Step 3. Evaluate recommendations Using PPS priority criteria - To Be Completed
    - These criteria include anticipated impacts of potential school right-sizing, the feasibility and consequences of multi-summer construction schedules, and potential disruptions to ongoing programs such as summer school.
    - This internal evaluation will ensure that project decisions align with both operational realities and district-wide educational goals.

Seismic Risk Assessment

Approaches for Investing in Seismic Improvements

Approach A - Campus-by-Campus:
Prioritize the highest-risk campuses and address all seismic deficiencies comprehensively at each selected site, treating each campus as a complete project

Advantages: Maximizes construction efficiencies, ensures seismic compliance for an entire campus, SRGP grants available for whole building retrofits

Disadvantages: Funding will be spent on some lower-risk building components within high-risk campuses, overall district-wide risk reduction will be limited

Approach B- Highest Risk Building Parts
Target individual building parts with the highest risk scores across the district. Focus on the most critical seismic risk building parts first and on maximizing safety improvements per dollar spent

Advantages: Achieves the greatest district-wide risk reduction by addressing the most dangerous conditions first

Disadvantages: Higher construction mobilization costs for more distributed work, increased project management complexity.

Approaches for Investing in Seismic Improvements

Approach C-

OSM recommends a hybrid of Approaches A and B that maximizes both grant opportunities by prioritizing some complete campus retrofit AND maximizes the reduction of seismic risk of the district by addressing individual high-risk building parts.

2025 Bond Seismic Improvements Program Status Report

- NEXT PHASE – EXECUTION PHASE
  - OSM will execute the prioritized seismic improvement projects according to its Standard Operating Procedures for bond-funded construction programs.
  - OSM will establish key performance indicators (KPIs) related to the Seismic program. Accountability and transparency will be provided through the following:
    - Bimonthly reports to the FIO Committee in a dashboard style report that communicates the status of the scope, schedule, and budget for each identified project.
    - Quarterly status reports Bond Accountability Committee.
    - A 2025 Bond Seismic Improvements website
    - The Seismic Improvements Program will be included in the annual performance audits that will cover the 2025 Bond as a whole.
