SYSTEM PLANNING AND PERFORMANCE - PORTLAND PUBLIC SCHOOLS

FOCUS OPTION REVIEW PART I: IMPACT OF FOCUS OPTIONS ON UNDER-ENROLLMENT AT NEIGHBORHOOD SCHOOLS

Preliminary Analysis | January 2016

In 2013, the Superintendent's Advisory Committee for Enrollment & Transfer (SACET) was tasked with developing recommendations to better align enrollment and transfer policies with the Portland Public Schools' (PPS) strategic framework, and Racial Educational Equity Policy. In keeping with the Superintendent's charge, SACET concentrated on focus option schools as described in the Education Options policy (6.10.022-P). Among the recommendations made by the committee in 2014 was to implement a quality review of District focus option schools, including dual language immersion programs, with the following objectives: 1) an explanation of the purpose of each focus option and the development of measures of success and an evaluation process *(Recommendation 3.1 and 3.2)* and 2) an examination of focus option locations as part of the district-wide boundary review, now called enrollment balancing *(Recommendation 3.3).*

This issue paper contains preliminary analysis conducted by the System Planning and Performance department (SPP) to support the Education Options Review committee, the group charged with conducting the focus option review. This analysis will also be provided to the District-wide Boundary Review Advisory Committee (DBRAC) to assist with enrollment balancing and specifically with the goal of sizing neighborhood schools in order to provide equitable core programming to all students.

This analysis addresses one theme: would changing the mix of focus options or how students access them alleviate under-enrollment or over-crowding at neighborhood schools? The role charter schools and community-based alternatives plays will also be reviewed. Specific questions to be addressed include:

1. Are there situations where focus option schools are contributing to under-enrollment at neighborhood schools?
2. Are there situations where re-thinking the locations of focus option schools could help to alleviate under-enrollment or over-crowding at neighborhood schools?
3. If fewer students attended focus options in the Southeast, where we see a disproportionate number of focus option schools, would neighborhood schools in the Southeast become over-crowded?
4. If there are focus option or alternative schools that should change locations to alleviate under-enrollment or over-crowding issues, what buildings might be able to support these schools?

EXECUTIVE SUMMARY – KEY FINDINGS

- ***Relocating focus options is not a primary driver in alleviating under-enrollment:*** There are a number of schools where the building cannot accommodate sufficient enrollment for its current configuration. Even if fewer students were enrolled in focus option schools, it would not address under-enrollment issues. This is true for Creston, Skyline, Marysville, Lee and potentially Vestal.

- ***However, there is a risk to compounding current under-enrollment problems by re-locating focus options to the North or Northeast due to the preponderance of Charter schools in these areas:*** While the North and Northeast has few focus options, it has many charter schools. Charter schools are an important factor in potential under-enrollment at neighborhood schools, especially in those neighborhoods. Locating focus options in the North or Northeast could potentially drain further enrollment from neighborhood schools, especially given the preponderance of charter schools in the area.
- ***Dual language immersion programs draw large numbers of students away from higher poverty under-enrolled schools; however, DLI aims to serve underserved populations.*** Dual language programs benefit underserved students, especially English Language Learners, and should be located in areas where native speakers of the partner language reside.
- ***For schools in the Southeast, the disproportionate number of educational options may be alleviating overcrowding.*** Moving focus options out of the Southeast may increase overcrowding at some neighborhood schools.
- ***Relocating thematic focus option schools and other educational options has potential in certain cases to simultaneously alleviate over-crowding and under-enrollment***
    - *ACCESS:* Relocating this alternative program could alleviate overcrowding on the split campus Beverly Cleary school.
    - *Alliance:* There may be potential for Alliance HS to become a single rather than split campus school, which could free the Meek site for a different educational option.
    - *Creative Science:* Relocating Creative Science could alleviate over-crowding and under-enrollment in the Southeast if the current site converts to a neighborhood elementary school feeding to a reconfigured middle school (such as Harrison Park).
    - *Metropolitan Learning Center (MLC):* The MLC site could hold a 2-section K5 and could alleviate overcrowding at Chapman, but could result in the creation of two smaller K5s that would be at higher risk of not being able to sustainably offer the core program due to their small size.
    - *Odyssey:* Odyssey no longer fits into Hayhurst and needs a new location. Removing Odyssey program from the Hayhurst facility, however, will result in under-enrollment at Hayhurst. There may be opportunity on the west side to increase the size of Hayhurst's boundary, while also reducing over-crowding at Chapman.
    - *Richmond:* It is not necessary to relocate Richmond in order to right-size neighborhood schools. PPS could relocate the program and still find a solution resulting in right-sized neighborhood schools within the region if there were other important reasons to do so.
    - *Sunnyside:* It is not necessary to relocate the Sunnyside Environmental focus option to right-size neighborhood schools. It is possible to develop a solution where Sunnyside becomes a neighborhood school or focus option-only school if there are other critical reasons for this change. However, there is not the opportunity for Sunnyside Environmental to expand its district wide enrollment due to the neighborhood enrollment.
    - *Winterhaven:* Winterhaven's building would not support a neighborhood 2 section K-8 and therefore, does not assist in alleviating over-crowding or under-enrollment at neighborhood schools.

- ***There are not many buildings that have enough classrooms available to house the programs identified for relocation through enrollment balancing scenarios: ACCESS, Creative Science, and Odyssey.*** Due to enrollment growth, PPS has fewer and fewer facilities available to house district-wide programs. See page 12 for a summary of buildings that are not currently operating as neighborhood or focus option locations and that have enough classrooms for these programs.

METHOD

As part of enrollment balancing, we wanted to better understand the impact of focus options on the enrollment of neighborhood schools. We believe this analysis is especially timely given the primary goal of Enrollment Balancing: to right-size neighborhood schools in order to provide equitable core programming to students. This analysis focuses only on neighborhood schools that are under-enrolled or nearly under-enrolled—because it is these schools that have the most difficulty sustainably offering the core program—and on overcrowded neighborhood schools, as these schools face the most difficulty in having the physical space necessary to offer the core program.

October 1, 2015 data was reviewed to determine if and how much focus option schools are affecting enrollment at the most under-enrolled schools. Other factors that might be contributing to a school's low enrollment were reviewed. With the exception of Alliance and MLC, this analysis did not focus on high school focus option schools or programs.

The focus of this analysis was **overcrowding** and **under-enrollment** at neighborhood schools. K-5 and K-8 Schools are considered *under-enrolled* if enrollment per grade is below 50 students per grade. Schools are considered overcrowded if their facility utilization (the number of classrooms divided by the number of teachers) is greater than 105%.

Schools may be both overcrowded and under-enrolled if they have both fewer than 50 students were grade *and* have too few classrooms to accommodate these students.

OVERVIEW OF CURRENT EDUCATIONAL OPTIONS

Types of Educational Options

Several types of programs and schools might be considered in-district "educational options". For the purposes of this review, the following types of schools are considered **focus options:**

Dual Language Immersion (DLI)

These programs offer instruction in both English and a partner language. The priority of DLI programs are to close opportunity gaps for historically underserved students. PPS offers programs in Spanish, Japanese, Mandarin Chinese, Russian, and Vietnamese. Currently, all DLI programs are co-located with a neighborhood school except for Richmond, which is a standalone immersion school. Families apply for their students to attend DLI programs. Richmond, Ainsworth, Woodstock (in the process of converting to a two-way program) and West Sylvan are one-way dual language immersion programs that serve primarily English native speakers. All other DLI schools are two-way immersion programs that aim to

serve both minority language and majority language students with each group modeling their native language for the other. James John, Rigler, Scott, and Sitton DLI programs serve only neighborhood families; no transfer slots are open to students from other neighborhoods.

Thematic Focus Options

These programs offer a unique curriculum around a theme. PPS currently offers programs that are both standalone and co-located with neighborhood schools in themes such as art, science, history, career and technical education. Two focus options, Sunnyside and Buckman, draw enrollment primarily from their neighborhoods with some spots made available for out-of-neighborhood applicants.

Alternative Options

For the purposes of this report and the educational option review, we are also including in-district alternatives including ACCESS, Alliance High School, and MLC. These options are not part of the PPS lottery; instead they have separate requirements (such as academic achievement and demonstrated need for alternative learning environment) and admission procedures.

School	Grades	Quadrant	Program/Need	Access
ACCESS at Rose City Park	1-8	NE	Highly gifted with demonstrated need for alternative environment	Application, references
Alliance	10-12	NE	Alternative high schools at Benson and Meek campuses	Application, counselor recommendation
Ainsworth	K-5	SW	Spanish Immersion	PPS Lottery
Atkinson	K-5	SE	Spanish Immersion	PPS Lottery
Beach	K-8	N	Spanish Immersion	PPS Lottery
Beaumont	6-8	NE	Spanish Immersion	PPS Lottery
Benson	9-12	NE	Thematic – Career Technical Education	PPS Lottery
Bridger	K-8	SE	Spanish Immersion	PPS Lottery
Buckman	K-5	SE	Thematic – Arts	Guarantee for neighborhood/ PPS Lottery
César Chávez	K-8	N	Spanish Immersion	PPS Lottery
Creative Science	K-8	SE	Thematic – Science	PPS Lottery
da Vinci Arts	6-8	NE	Thematic – Arts	PPS Lottery
East/West Sylvan	6-8	SW	Spanish Immersion	PPS Lottery
Hayhurst - Odyssey	K-8	SW	Thematic – History	PPS Lottery
Hosford	6-8	SE	Chinese Immersion	PPS Lottery
James John	K-5	N	Spanish Immersion	PPS Lottery
Jefferson High School	9-12	N	Thematic - Middle College	Guarantee for

			for Advanced Studies	Jefferson neighborhood; PPS Lottery
Kelly	K-5	SE	Russian Immersion	PPS Lottery
King	K-8	SE	Mandarin Immersion	PPS Lottery
Lane	6-8	SE	Russian Immersion	PPS Lottery
Lent	K-8	SE	Spanish Immersion	PPS Lottery
Metropolitan Learning Center (MLC)	K-12	NW	Parent/student interest in self-directed, experiential learning	Application
Mt. Tabor	6-8	SE	Japanese and Spanish Immersion	PPS Lottery
Richmond	PK-5	SE	Japanese Immersion (entire school)	PPS Lottery
Rigler School	K-5	NE	Spanish Immersion	PPS Lottery
Roseway Heights	K-8	NE	Vietnamese Immersion	PPS Lottery
Scott Spanish	K-8	NE	Spanish Immersion	PPS Lottery
Sitton Spanish	K-5	N	Spanish Immersion	PPS Lottery
Sunnyside Environmental	K-8	SE	Thematic - Environmental Studies	Guarantee for neighborhood/ PPS Lottery
Winterhaven	K-8	SE	Thematic - Math and Science	PPS Lottery
Woodstock	K-5	SE	Chinese Immersion	PPS Lottery

How are Educational Options accessed?

EDUCATIONAL OPTION TYPE	DISTRICT-WIDE LOTTERY	HYBRID – BOTH DISTRICT-WIDE LOTTERY AND NEIGHBORHOOD BASED	100% NEIGHBORHOOD BASED--LOTTERY	OTHER
THEMATIC	• Benson • DaVinci • Winterhaven	• Sunnyside • Buckman • Jefferson		
IMMERSION	• Richmond • Most DLI programs have lottery transfer slots for neighborhood and non-neighborhood		• James John • Rigler • Scott • Sitton	
ALTERNATIVE				• Access • MLC • Alliance

IMPACT OF FOCUS OPTION SCHOOLS ON ENROLLMENT AT UNDER-ENROLLED NEIGHBORHOOD SCHOOLS

K-5 and K-8 Schools are considered under-enrolled if enrollment per grade is below 50 students per grade. We also analyzed schools that were nearly under-enrolled, including Lee and Arleta (50.7 students per grade) and Woodmere (52 students per grade).

2015-16 Under-Enrolled or Nearly Under-Enrolled Schools

School	Enrollment Per Grade 2015-16
Skyline	33.3
Peninsula	41.6
Marysville	43.3
Creston	43.6
King	44.4
Whitman	45.2
Vernon	45.2
Vestal	45.8
Woodlawn	47.3
Arleta	50.7
Lee	50.7
Woodmere	52.0

Next, we examined the capture rates of each of these schools to determine if this was a factor in the school's under-enrollment (as opposed to some other factor, such as a boundary drawn too small).

2015-16 Capture Rates and Ranks

School	2015-16 Capture Rate	Capture Rate Rank (1-62)
Skyline	85%	8
Woodmere	70%	35
Lee	66%	38
Whitman	66%	39
Arleta	63%	46
Marysville	62%	47
King	58%	52
Peninsula	56%	54
Creston	54%	57
Vernon	54%	59
Vestal	54%	60
Woodlawn	44%	62

Note. A full pie chart indicates that a school is within 75th percentile or above for capture rates. An empty pie chart indicates that a school is below 25th percentile. Includes Woodmere, which is near under-enrolled (52 students per grade).

A total of 62 schools were analyzed. The "capture rate rank" indicates in what order a school's capture rate ranked in comparison to the other 61 schools with grades K-8 for the 2015-16 school year.

On average, under-enrolled schools appear to have lower capture rates compared to other schools. Of the twelve schools examined, 8 of them were below average. Six of the 12 schools (King, Peninsula, Creston, Vernon, Vestal, and Woodlawn) were in the bottom quartile. Skyline appears to be an outlier, as it is in the top quartile for capture rate.

The next key question we addressed is where the uncaptured neighborhood students attend instead of their neighborhood school. If these students were attending their neighborhood schools, would under-enrollment issues be addressed?

Below is a chart indicating the percent of students attending educational options, including focus option schools (i.e. DLI and thematic focus options) and in-district alternatives (such as ACCESS and MLC). The chart also lists facility "utilization" – above 105% is considered significantly over-crowded. Above 100% is considered over-crowded. It also outlines the percentage of students attending charter schools, another lottery based option for students (although PPS does not run this lottery).

2015-16 Attending PPS Educational Options and Facility Utilization

School	Enrollment Per Grade	Utilization 2015-16	Neighborhood Students	Attending Educational Options	% of Attending Educational Options	Attending Thematic Focus Option	% Attending Thematic Focus Option	Attending Alternative School	% Attending Alternative School	Attending DLI*	% Attending DLI*
Skyline	33.3	100.0%	280	12	4%	2	0.7%	6	2.1%	4	1.4%
Peninsula	41.6	83.2%	359	68	19%	3	0.8%	25	7.0%	40	11.1%
Marysville	43.3	98.4%	513	91	18%	23	4.5%	3	0.6%	65	12.7%
Creston	43.6	106.1%	490	145	30%	53	10.8%	7	1.4%	85	17.3%
King	44.4	69.9%	374	56	15%	17	4.5%	14	3.7%	25	6.7%
Whitman	45.2	62.8%	373	47	13%	16	4.3%	3	0.8%	28	7.5%
Vernon	45.2	77.2%	644	122	19%	39	6.1%	26	4.0%	57	8.9%
Vestal	45.8	96.5%	633	165	26%	94	14.8%	4	0.6%	67	10.6%
Woodlawn	47.3	89.6%	661	94	14%	17	2.6%	20	3.0%	57	8.6%
Arleta	50.7	93.1%	548	122	22%	61	11.1%	4	0.7%	57	10.4%
Lee	50.7	103.9%	568	56	10%	27	4.8%	5	0.9%	24	4.2%
Woodmere	52.0	82.3%	371	46	12%	15	4.0%	1	0.3%	30	8.1%

Note. Enrollment per grade and utilization shown is the estimate used in modeling scenarios for enrollment balancing.

This chart showcases the following:

- For some schools, their building is simply not right-sized to accommodate sufficient enrollment in their current configuration. Even if fewer students were lost to alternative schools, they would become overcrowded, because the buildings are too small to accommodate sufficient enrollment in their current grade configuration. This is true for Creston, Skyline, Marysville and Lee.
- Charter schools are an important factor in potential under-enrollment at neighborhood schools, especially in the North and Northeast. Woodlawn loses more students to charter schools than it does to other educational options. Further analysis on Woodlawn indicates that the school loses only 17 students to thematic focus options and 57 students to Dual Language Immersion. Vernon and Peninsula are also strongly impacted by charter schools. Locating additional focus options in the North or Northeast could potentially drain further enrollment from neighborhood schools, especially given the preponderance of charter schools in the area.

Dual Language Immersion Versus Thematic Focus Options

School	Enrollment Per Grade	Utilization 2015-16	Neighborhood Students	Attending Educational Options	% of Attending Educational Options	Attending Thematic Focus Option	% Attending Thematic Focus Option	Attending DLI*	% Attending DLI*
Skyline	33.3	100.0%	280	12	4%	2	0.7%	4	1.4%
Peninsula	41.6	83.2%	359	68	19%	3	0.8%	40	11.1%
Marysville	43.3	98.4%	513	91	18%	23	4.5%	65	12.7%
Creston	43.6	106.1%	490	145	30%	53	10.8%	85	17.3%
King	44.4	69.9%	374	56	15%	17	4.5%	25	6.7%
Whitman	45.2	62.8%	373	47	13%	16	4.3%	28	7.5%
Vernon	45.2	77.2%	644	122	19%	39	6.1%	57	8.9%
Vestal	45.8	96.5%	633	165	26%	94	14.8%	67	10.6%
Woodlawn	47.3	89.6%	661	94	14%	17	2.6%	57	8.6%
Arleta	50.7	93.1%	548	122	22%	61	11.1%	57	10.4%
Lee	50.7	103.9%	568	56	10%	27	4.8%	24	4.2%
Woodmere	52.0	82.3%	371	46	12%	15	4.0%	30	8.1%

Note: Educational options includes DLI, thematic focus options, and district alternatives (e.g., ACCESS, MLC). Only DLI and focus options shown here for comparison. “Attending DLI” only designates students attending dual language immersion not

through their neighborhood school. For example, King neighborhood students attending King DLI are counted as attending their neighborhood school not counted in the dual language immersion column.

For seven under-enrolled schools, the majority of neighborhood students attending educational options dual language programs outside of their neighborhood schools. These schools are Peninsula, Marysville, Creston, King, Whitman, Vernon, and Woodlawn. Of these seven schools, all are in higher poverty neighborhoods (ranging from 38% to 62% direct certification in 2014-15).

Siting is important for dual language immersion programs. Co-located dual language immersion programs are sited to be proximal to native speakers of the partner language. A RAND study of dual language immersion programs in PPS schools suggested that DLI improves reading scores and the percentage of English Language Learners passing the English Language Proficiency Assessment (ELPA).

ARE THERE NEIGHBORHOOD SCHOOLS WHERE EDUCATIONAL OPTIONS ARE PREVENTING OVER-CROWDING?

The following table shows the highest utilization schools and the number of students within each school neighborhood that attend educational options (including focus options, alternatives, and dual language programs outside of their neighborhood).

Schools with 100% or Higher Utilization

School	Enrollment Per Grade	Utilization 2015-16	Neighborhood Students	Attending Educational Options	% of Attending Educational Options
Beverly Cleary	95.4	118.4%	1003	140	14%
Astor	54.8	108.6%	509	46	9%
Harrison Park	81.0	108.4%	1016	199	20%
Chapman	107.2	107.8%	766	78	10%
Creston	43.6	106.1%	490	145	30%
Laurelhurst	76.8	105.9%	703	68	10%
Sunnyside	63.8	105.8%	458	70	15%
Sitton	65.0	104.9%	530	43	8%
Bridger	52.9	104.7%	515	146	28%
Lee	50.7	103.9%	568	56	10%
César Chávez	58.0	103.1%	468	18	4%
Llewellyn	88.5	102.5%	491	43	9%
Capitol Hill	72.8	102.0%	449	35	8%
Hayhurst	83.2	101.8%	395	15	4%
Lewis	63.7	101.6%	349	40	11%
Roseway	77.4	100.1%	561	96	17%
Skyline	33.3	100.0%	280	12	4%

Of the neighborhood schools in the above table, many would likely be more overcrowded if the students attending educational options were instead attending their neighborhood school.

However, we cannot assume that students attending educational options would switch to their neighborhood school if the educational option was relocated. Families might choose another option, such as a charter or private school instead. Similarly, we cannot assume that all students enrolled in an educational option will continue to enroll in that program if it is sited elsewhere.

Focus Option Siting: A Closer Look at the Southeast

In this section, we address the question: If fewer students attended focus options in the Southeast (e.g., if focus options were re-sited elsewhere), where we see a disproportionate number of focus option schools, would Southeast neighborhood schools become overcrowded?

Example: Bridger

Twenty-eight percent of students (146 students) in the Bridger neighborhood are attending PPS focus options or alternative schools instead of Bridger, which is nearly overcrowded (104.7% utilization) according to the modeling used to develop enrollment balancing scenarios.

What Schools Do Bridger Neighborhood Students Attend?		
Schools/Programs		Number from Bridger Neighborhood Attending
Attending Educational Options	ACCESS	8
	Buckman	7
	Creative Science School	50
	Da Vinci	7
	Odyssey	1
	Sunnyside Environmental	7
	Winterhaven	4
	Dual Language Immersion (not including Bridger)	62
	Total Students Attending Educational Options	***146***
	Other Neighborhood School	85
	PPS Charter	11
	Bridger (including Bridger DLI)	273

If all 146 students attending focus options and alternatives were to instead enroll at Bridger, their average enrollment per grade would jump from about 2 sections (average of 52.9 students per grade) to close to 3 sections per grade (average of 69.1 students per grade). These additional students need additional teachers. Because Bridger is already highly utilized, even one or two more teachers would cause Bridger to become overcrowded. Nearby focus options and alternatives play a role in alleviating Bridger's overcrowding.

Example: Sunnyside Environmental

In another example, we explore the effects of Sunnyside becoming a neighborhood school. Sunnyside enrollment consists of both students from a neighborhood catchment and from PPS lottery applications. Sunnyside enrolled 574 students as of October 1, 2015, of which 360 are from the neighborhood and 214 are from other schools.

Number of Transfers into Sunnyside	
Neighborhood	**Students from Neighborhood**
Hosford	23
Abernethy	19
Mt Tabor	16
Glencoe	15
Creston	10
Lee	10
Boise-Eliot/Humboldt	9
Beverly Cleary	8
Buckman	8
Sabin	8
Other Neighborhoods	88
Sunnyside Environmental	*360*

If Sunnyside became a neighborhood school and the K-8 environmental focus option program was to relocate, we cannot be sure what the changes to Sunnyside's capture rate would be as a neighborhood school. Depending on where the focus option relocated, it is also uncertain how many students—and from which neighborhoods—would enroll. However, we can see that Sunnyside primarily draws students from adjacent neighborhoods. If the focus option was relocated to, for example, North/Northeast Portland, it could draw similar numbers of students from proximate schools (for example, Hosford and Abernethy lose about 20 students each—close to a full class of students). If this was the case, already under-enrolled schools such as Woodlawn, Peninsula, and King could lose even more students and be even less able to sustainably provide the core program.

ARE THERE EDUCATIONAL OPTIONS THAT COULD BE CHANGED TO ALLEVIATE OVERCROWDING?

In some situations, moving educational options may alleviate overcrowding in co-located or nearby neighborhood schools. The next section summarizes opportunities and challenges at focus option and alternative sites.

ACCESS

ACCESS is a district-wide alternative program serving students with specific social and academic needs; it occupies 16 classrooms in the Rose City Park site, which is shared with Beverly Cleary, an overcrowded

school split across Hollyrood, Fernwood, and Rose City Park campuses. Relocating ACCESS could alleviate overcrowding at Beverly Cleary through grade reconfiguration.

Alliance

Alliance High School is split across Benson and Meek campuses. It serves a high percentage of underserved students and may need to be relocated if they are not provided space as part of the Benson High School bond. To better serve the populations in these programs, a centrally located separate building or wing would be preferable.

Creative Science School

Relocating this focus option could open the Clark building to become an elementary school that could feed to a reconfigured middle school in the SE. These changes could alleviate overcrowding at Harrison Park and the nearly-overcrowded Bridger.

Metropolitan Learning Center (MLC)

This district-wide alternative serves students with specific educational needs. The MLC site is large enough to hold a 2-section K5 and is located near overcrowded Chapman ES. However, boundary changes alone would be enough to alleviate overcrowding in this region. Adding a new elementary school to this region would create two smaller, 2-section K5s that would be less able to absorb fluctuations in enrollment. Additionally, a similar sized site (approximately 21 rooms) would be needed to house MLC.

Odyssey

The K8 Odyssey program no longer fits at Hayhurst and needs a new location. Relocating Odyssey would result in under-enrollment at Hayhurst. There may be opportunities to increase the size of Hayhurst's boundary while reducing overcrowding at Chapman.

Richmond

It is not necessary to relocate Richmond solely to right size nearby neighborhood schools. However, PPS could relocate the program and find a solution that would result in right-sized neighborhood schools if there were other important reasons to do so.

Sunnyside Environmental

It is not necessary to relocate Sunnyside solely to balance enrollment at nearby neighborhood schools. Like Richmond, PPS could relocate the focus option and find a solution that would result in right-sized neighborhood schools if there were other important reasons to do so.

Winterhaven

Winterhaven is located in a building that would not support a neighborhood 2 section K5 or K8 and therefore re-siting it does not assist in alleviating overcrowding or under-enrollment at neighborhood schools.

IF THERE ARE FOCUS OPTION OR ALTERNATIVE SCHOOLS THAT COULD CHANGE LOCATIONS FOR ENROLLMENT BALANCING, WHAT BUILDINGS MIGHT BE ABLE TO SUPPORT THESE SCHOOLS?

In the previous section, we identified focus options and alternatives that have the greatest opportunity to balance enrollment through relocation: ACCESS, Creative Science, and Odyssey. We examine which buildings could possibly house these educational options.

				Hollyrood	Edwards	Wilcox	Holladay Center	Youngson	East Sylvan	Terwilliger	Applegate	Meek Pro Tech	Smith	Kenton	Humboldt	Tubman	Kellogg
			Classrooms Available	8	9	11	11	12	13	14	12	16	18	21	21	35	37
Educational Option	Current 2015-16 Enrollment	Configuration	Estimated Classrooms Needed														
ACCESS	346	Grades 1-8	16									✓	✓	✓	✓	✓	✓
Creative Science School	476	Grades K-8	21.1											!	!	✓	✓
Odyssey	222	Grades K-8	9		✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓

Note. Sites with a green check have enough classrooms to fit the educational option. Sites with a yellow exclamation mark may possibly be able to house the educational option. This analysis is based on classrooms available only and does not take into consideration transportation access, location to populations served, or possible building improvements needed.

All buildings listed, with the exception of East Sylvan, Humboldt, Kellogg and Smith are leased or are expected to be in use by PPS programs through at least the 2016-17 school year. A change in use for occupied buildings would likely result in displacement of other programs and services.
